ESSENTIALS OF DRUG CHEMISTRY

Free and Online

Essentials of Drug Chemistry is a free, on-demand course ideal for professionals in forensic science, law enforcement and legal fields.

This course provides a comprehensive understanding of drug chemistry evidence. You will learn about the various types of drug chemistry evidence commonly accepted by laboratories, as well as the proper procedures for collecting, packaging, labeling and submitting such evidence. The course also delves into the laboratory analysis process for drug chemistry evidence, exploring techniques used to identify different substances. You'll also gain insights into the current trends in seized drugs and the types of cases commonly submitted to drug chemistry laboratories.

This course has been approved for two hours of continuing education credit by the Alabama Peace Officers Standards and Training Commission. It is presented by Matt Grbac, forensic scientist with the Alabama Department of Forensic Sciences.
